Geotechnical centrifuge modeling - Wikipedia Geotechnical centrifuge modeling is a technique for testing physical scale models of Geotechnical Engineering systems such as natural and man-made slopes and earth retaining structures and building or bridge foundations. Polymer Foam Testing and Modeling | Veryst Engineering The test is then simulated with the calibrated material model and the results are compared to the experimental data. Figure 5 shows a video of the effective strain rate in the material during the FE simulation. The sample experiences extremely high strain rates, over 10,000/s. Model-based testing - Wikipedia Because test suites are derived from models and not from source code, model-based testing is usually seen as one form of black-box testing. Model-based testing for complex software systems is still an evolving field.
